

HeuTimer UNO

Short feeding breaks & flexible feeding times

With a time-controlled HeuTimer automatic hay feeder, the roughage for your horses can be divided into any number of feeding intervals.

The HeuTimer automatically opens at the desired time so that the horses can feed.

The desired amount of roughage can be stored in advance and dispensed over several days.

The HeuTimer enables time-controlled hay feeding for horses held in groups or in boxes.

HeuTimer UNO 2.0 und 4.0

HeuTimer UNO 2.0

The hay is stored behind flexibly adjustable bars. The hay timer opens at the scheduled time and the horse can pull the hay through the feeding fence to feed. Then, at the desired time, the feeder closes for the horse from top to bottom.

Particularly suitable for:

- Box and group housing
- Discharge chutes from the hayloft directly into the stable
- When used for 2 boxes
- Installation at feeding stalls

HeuTimer UNO 4.0

As soon as the HeuTimer opens, the horse reaches the feed behind it. Whether there is hay, silage, grass or haylage behind the element makes no difference. At the desired time, the tarpaulin closes from bottom to top.

Particularly suitable for:

- Box and group housing
- For easy fodder storage, even for several days: Large storage unit

NOW add concentrate feeder to HeuTimer and automate complete feeding!

Advantages for you as a horse owner (UNO 2.0 und 4.0):

- Less work
- Increased flexibility
- Daily routine can be individually programmed: You decide when and how long the feeder should open (no fixed intervals or max. number of portions)
- More peace and quiet in the stable

Advantages for your horse (UNO 2.0 und 4.0):

- Short feeding break
- Feeding activity around the clock
- No feeding stress
- More peace and quiet in the stable due to individual feeding times
